

Ethical Dilemmas in Selecting Health Care Technologies in Israel

Dr. Miriam Ines Siebzechner, RN, MPA, PhD

ICTAHC

The Gertner Institute for Epidemiology and Health Policy Research
and Medical Administration, Ministry of Health, ISRAEL

“I have been suffering from psoriasis for the past 12 years. The disease erupted after the death of my only daughter, 11 years old , of leukemia.

Today I would like to ask you:

Who decides that a few weeks or months prolonging the life of a terminal patient is more important than 30 years of normal life for a psoriasis patient?”

To be or not to be?

**Less for
Many**

**More for
Few**

To be or not to be?

			
Indications:	Treatment for hypercholesterolemia and high risk of a cardiovascular event		Adjuvant treatment for HER2-positive early breast cancer with a high risk of recurrence
Patients (p):	28,000		350
Cost/p (NIS)	2,366		195,834
Overall cost (million NIS)	66,235 mil		68,542
Benefits :	Reducing cardiovascular events, quality of life, long term		Reducing recurrence, life saving, short term

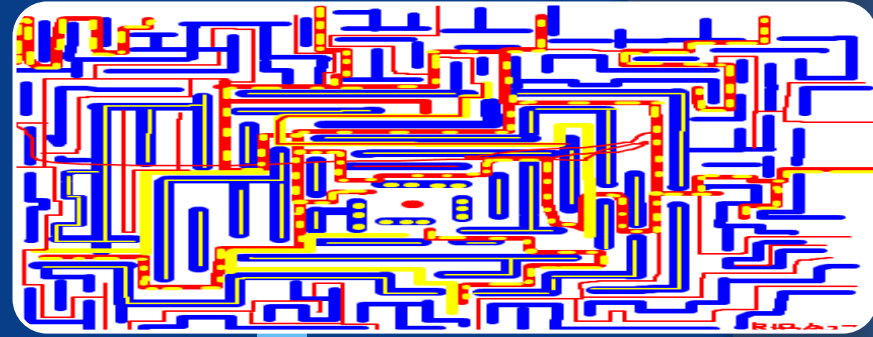

Outline

**The Israeli Health Care System
Characteristics**

**The National Health Insurance
Law**

Health Technology Assessment

**Ethical dilemmas in decision-
making**

**The Process of Updating the
National List of Health Services**

The Israeli Health Care System Characteristics

Inherent shortage of resources

Accelerated development of health technologies

- **pharmaceuticals, medical devices, medical procedures and information technology**

Rising demand for advanced technologies - by

- **patients and health care providers**

System mix -

- **public and private services**

National Health Insurance Law

The National Health Insurance Law NHIL

“The N.H.I.L. is based on the principles
of justice, equality and solidarity...”

The National Health Insurance Law – NHIL

Selected Components

Universal coverage (mandatory)

Freedom of choice between the four Health Funds

Defined and universal package of health benefits – the National List of Health Services (NLHS)

Health Technology Assessment (HTA)

HTA is a multidisciplinary process that summarizes information about:

medical

social

economic

ethical
issues

related to the use of a health technology in a systematic, transparent, unbiased, robust manner

The Process of Updating the NLHS (National List of Health Services)

Submission of candidate technologies for inclusion

- Sorting, categorizing, gathering data

January-March

HTA

- Population needs, safety, efficacy, effectiveness
- Economic assessment

April-July

Literature review & Expert consultations & Sub-Committee

- National Councils, Professional Unions, Health Funds

Aug.-Sept.

Medical Technology Forum - MOH

- Priority – High/ Medium/ Low

October

Public National Committee Deliberations

- Recommendations for inclusion

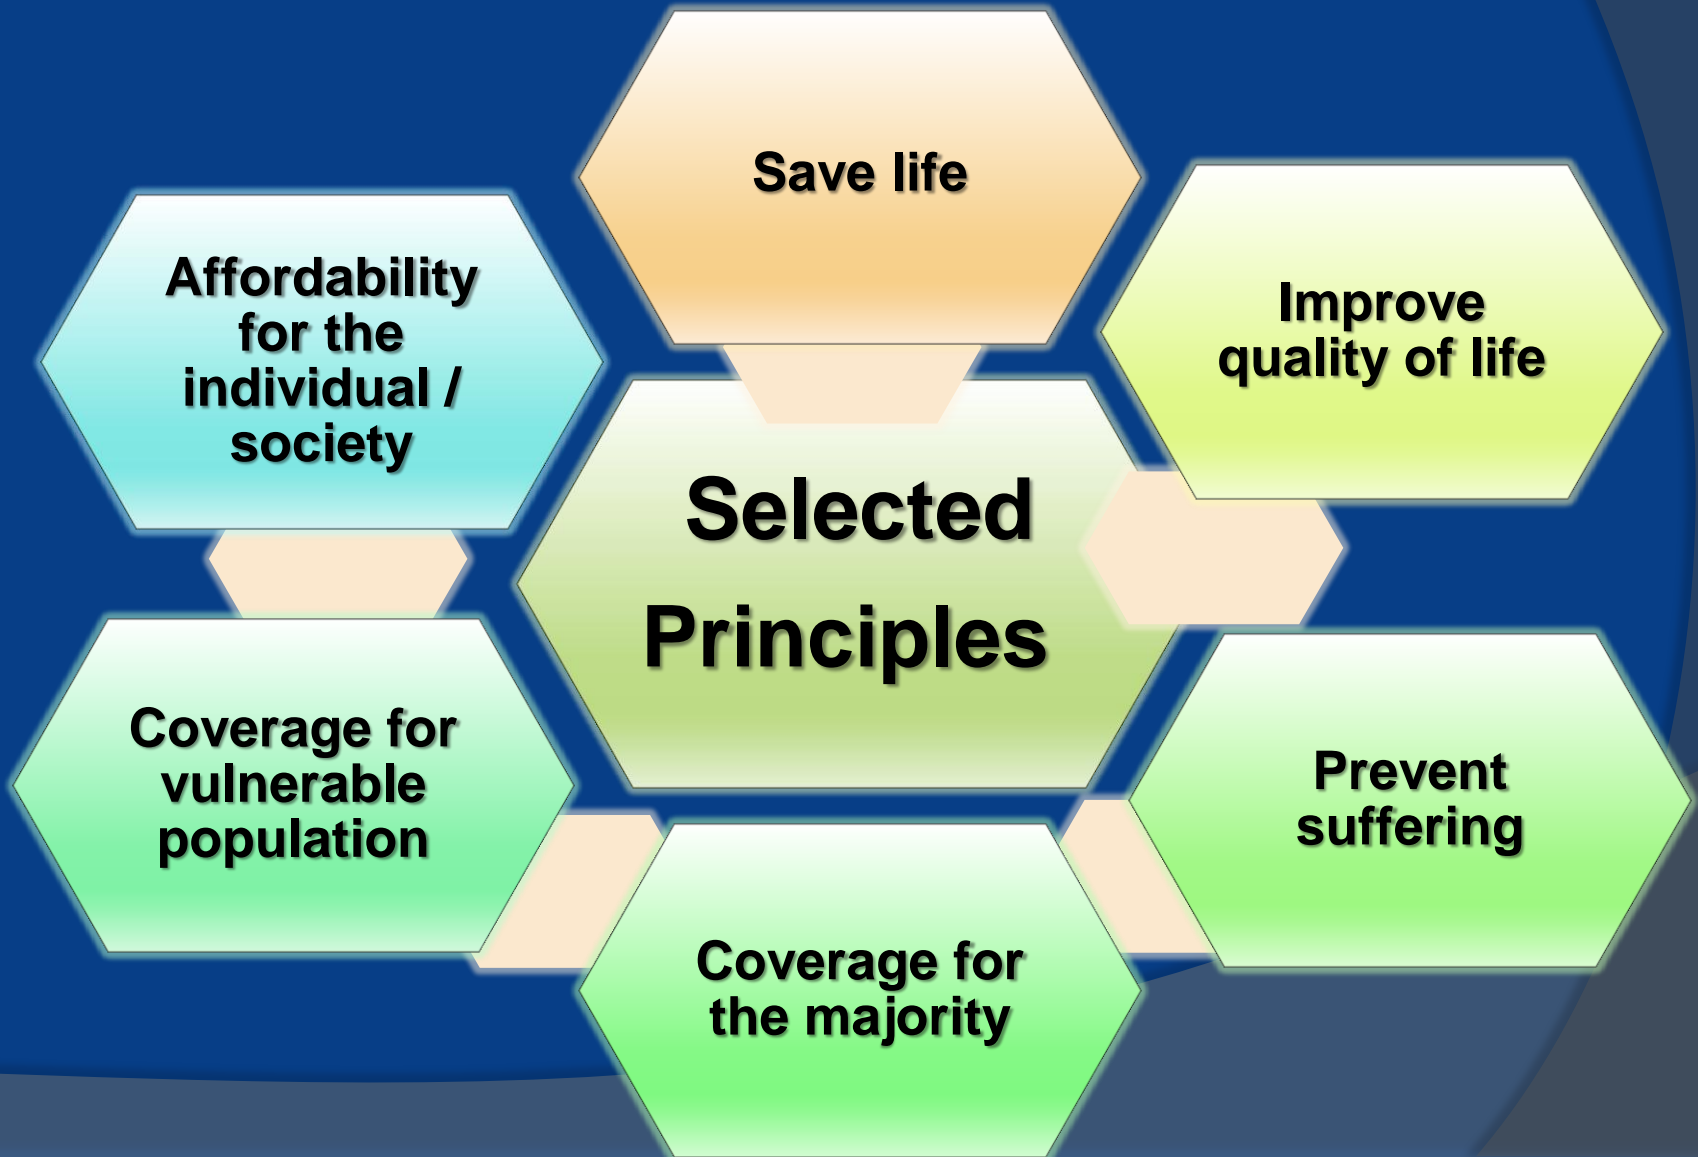

Nov-Dec

The Process of Updating the National List of Health Services

The Israeli HTA Model

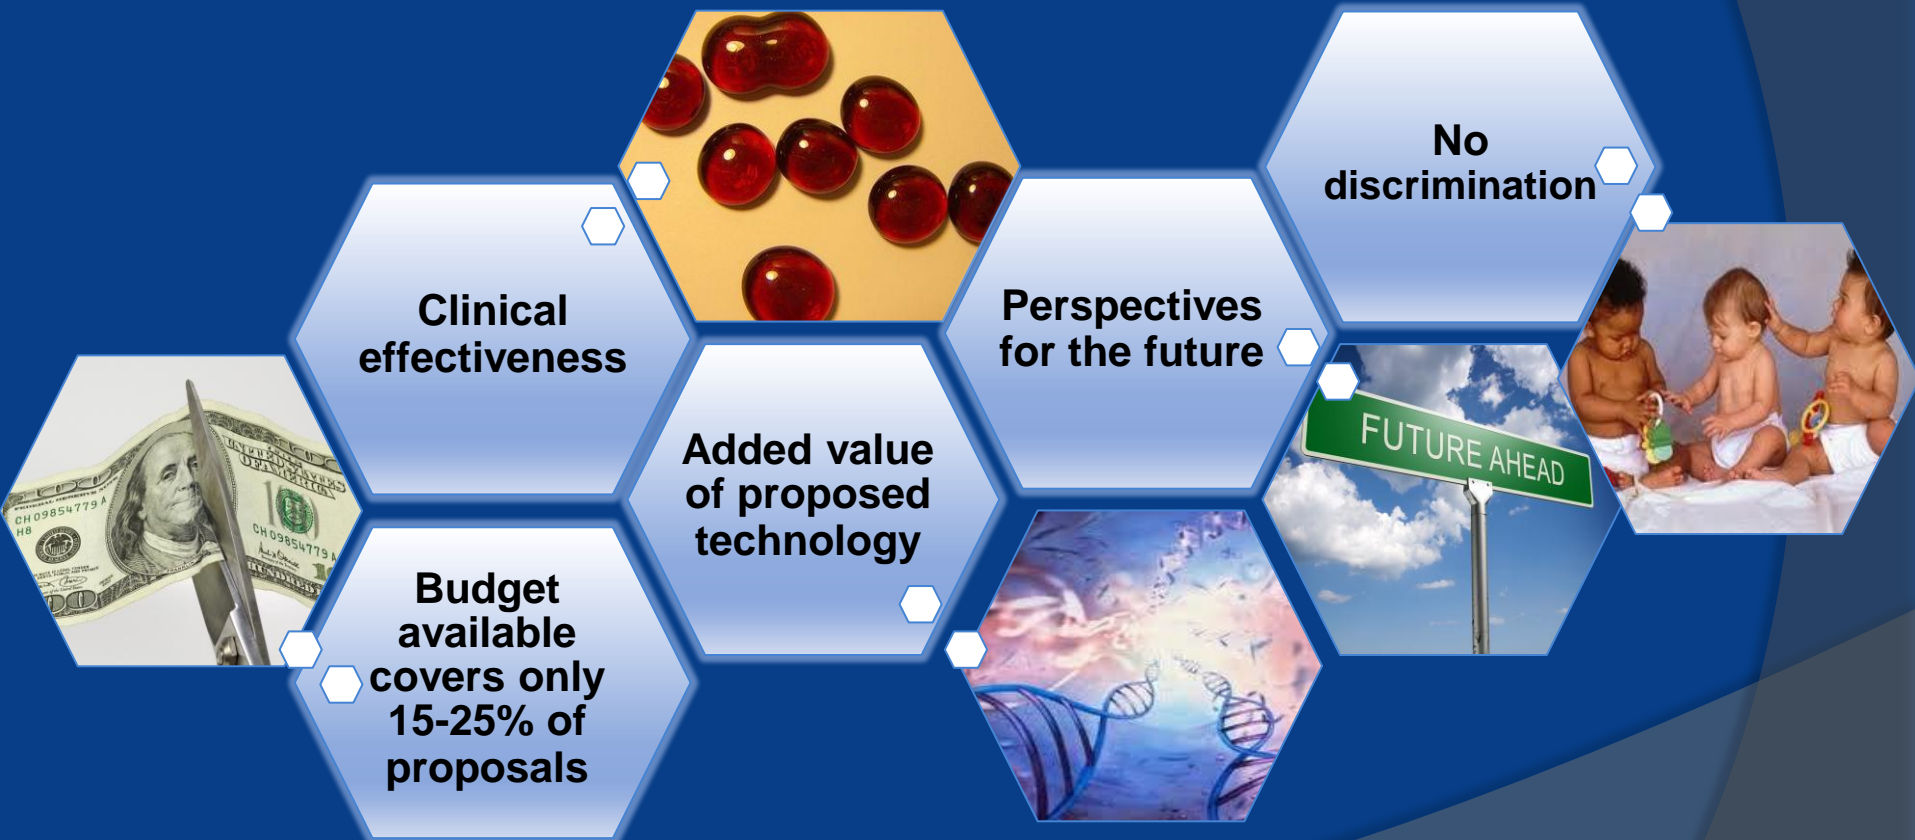

The process of updating the NLHS Public National Advisory Committee

The process of updating the NLHS

Basic premises

Dilemmas in Decision Making

Ethical Considerations

Critical ages

Civil rights

No
discrimination

Patient
Autonomy

Better future
potential

Defining
"vulnerable
groups"

The rule of
rescue

Conclusions

Even though the process faces many dilemmas, it provides a pragmatic model, striking a balance among clinical, economical, social, ethical, legal, technocratic and political input in managing access to health care

תזכור
